## What is Daily Bites?

Daily Bites is an auditory food tracking application designed to streamline diet data entry and revolutionize nutrition applications. Daily Bites features a Natural Language Processing chatbot, insightful data analytics, and user specific recipe recommendations.

## How does Daily Bites operate?

### Daily Bites Architecture

## What technologies does Daily Bites use?

## What is the motivation behind Daily Bites?

Our motivation behind this project includes creating a more intuitive design to improve the user's experience, making our chatbot speak more similarly to that of a nutritionist, and migrating the backend so that it is entirely hosted on the cloud. Additionally, we are adding a recipe recommendations page that is tailored to each user's unique diet.
